Design Brief

Project Description	What is the business problem or opportunity? Describe the project in a few sentences, as you would in an “elevator pitch.” Online Video Streaming Aggregator Design a video streaming solution which also act like an aggregator of various streaming platforms and aids in viewing and managing content.
Scope (refer to step 2)	What is within the scope of the project and what is outside it? What boundaries or constraints must your solution accommodate? In Scope: • Online Web Streaming, Mobile Browsers • Personal Computers: Consumers can access Streaming Videos on Platform from desktop and mobile based web browsers. Out of Scope: • Connected TV Devices • Mobile OTT Apps
Users and Stakeholders	Who are you designing for? (Try to be as specific as possible.) Who else is important to consider? Why are they important to the project? Indian users especially, parents, children’s, grand parents, students and working professionals. Small society schools, teachers, drivers, delivery agents, guards, daily maids.
Exploration Questions	What are you curious to learn about your users and how they think, feel, and behave? What key questions will you need to answer through your research? These may include things like changes in the environment, emerging technical possibilities, or new business models. It is important to understand what opportunities do they see from the web steaming services on internet, what channels they are interested in and how do they manage the most import streaming touch points.
Expected Outcomes and Success Metrics	How does the world look different after your project succeeds? What specific metrics might help you assess whether this is happening? How can we design a Web based interface which shows the aggregated view of all Streaming Platforms, yet can group and filter the desired results based on Channel and Program Interest. One Web Platform to Ingest all your apps and Manage Edit and Create Channels

Design Brief

The design brief involves the design and development of a web streaming video application tailored for the Indian market.

The application aims to provide a user-friendly platform for streaming a wide range of content, including movies, TV shows, live sports, and curated videos, to a diverse Indian audience.

The primary goal is to create an engaging and seamless user experience while addressing specific cultural and regional preferences.

This focuses to implemet personalized recommendations and user profiles to enhance content discovery.

Optimize streaming quality based on available bandwidth and Internet browser based capabilities.

Key Deliverables:

- Functional web streaming video application.
- A diverse and extensive content library.
- User-friendly interface with personalized features.

By successfully executing this design brief, the Indian Web Streaming Videos Application aims to become a leading player in the Indian digital entertainment industry, providing a top-tier streaming experience for millions of users across the country.

Project Title
Online OTT Web Streaming Video Platform

Insights and Design Criteria	
Insights	Design Criteria
Sandhya loves to seeks seamless streaming, personalized episode recommendations, and early access to new episodes.	To group by her favourtite content as Sandhya logs in to we streaming application based on her log in details.
Madan Prioritizes high-quality live streaming, sports-related content, and real-time notifications for matches.	Madan Content filters by his favourite sports related content and upcoming events.
Ananya Wants access to a vast library of Fashion Shows,Big Boss Episodes, appreciates high-quality streaming, and values a user-friendly interface.	Will use Auto Group-by and Filter-by HD Channels and Videos for respected Channels.

Design Insights

- Display Meaningful observations, based on the data you have collected.
- How is this a pain point in the current system?

Design Criteria

- The criteria describe the attributes an ideal solution should have.
- Concise list of relevant constraints and aspirations for the solution
- Criteria encompass user needs and perceptions
- Criteria list is specific
- Criteria are actionable

User Persona

Brief

Time30 Minutes

Format1:1 Interview

InterviewerSandeep Virmani

ScopeIndian OTT Platform

Objective

- Understand the behaviour of the India community when Using OTT
- Platform Services on Online Web Streaming
- Understand their preferences towards Web Streaming
- Understanding feature needs and opportunities
- What features interest the most to our users according to their needs

Findings

Name	City	Age	Profession	Interest,Inspire	Devices
Madan	Bangalore	32	Manager Software	Badminton,Running Cricket Matches, News, Trailers, Biking	Mobile, Laptop Ipad
Sandhya	Bangalore	27	House Wife	Cooking, Parenting 5 Yrs daughter, Gmail, News	Mobile, laptop
Sampurna	Bangalore	65	Grand Parent	Cooking, Devotional Channels News on Modi, India Progress, Mythological TV series (Ahaliya)	Mobile, Old desktop, Ipad, TV
Ananya	Mumbai	19	Student	Fashion Design Shows and News, Big Boss, Fashion TV, Music, Web Series	Mobile, Laptop Ipad

User Personas

These user personas serve as a foundation for designing the user interface, content recommendations, marketing strategies, and other aspects of the Online OTT Web Streaming Video Platform.

By understanding the needs and preferences of these personas, the platform can create a more tailored and engaging experience for its diverse user base.

In the limited time I happen to interview few young neighbours, including a old lady of 65 years old. I also interviewed my daughter who is a college student.

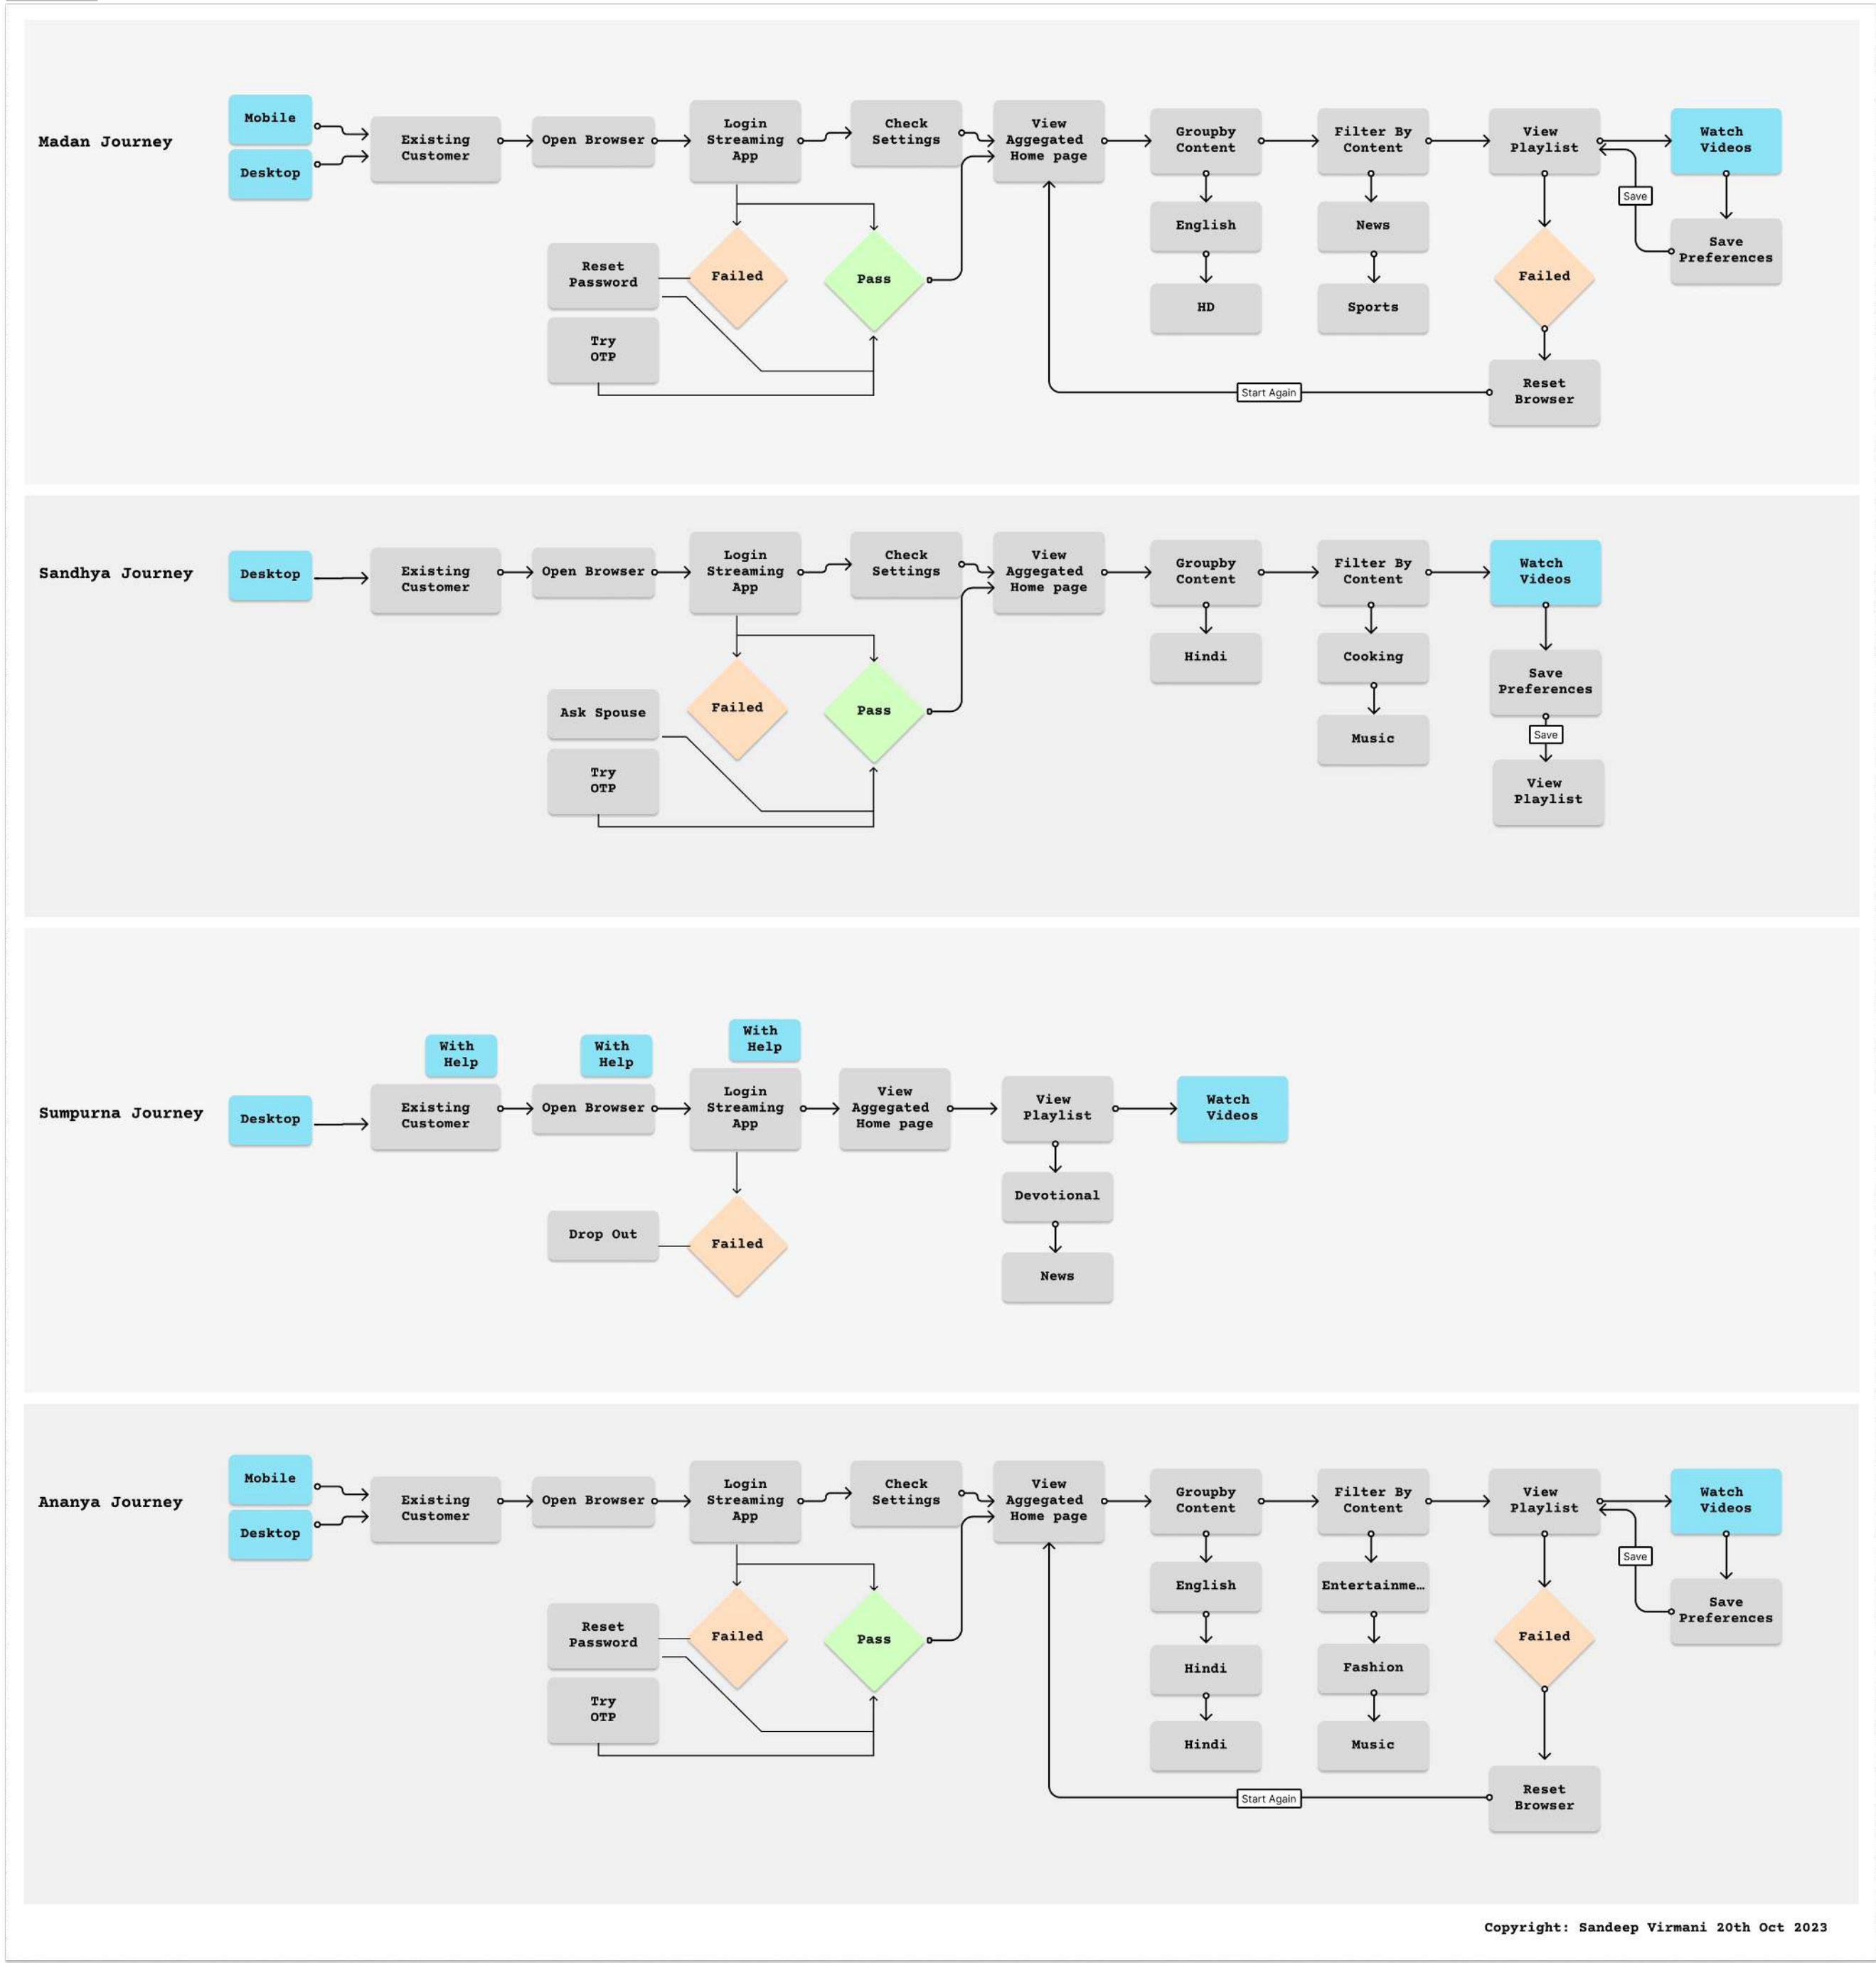

Some of the findings are:

Sandhya loves to seeks seamless streaming, personalized episode recommendations, and early access to new episodes.

Madan Prioritizes high-quality live streaming, sports-related content, and real-time notifications for matches.

Ananya Wants access to a vast library of Fashion Shows,Big Boss Episodes, appreciates high-quality streaming, and values a user-friendly interface.

Sampurna Values devotional and mythological content, social integration, and Indian Success Stories.

Journey Maps

My Online OTT Web Streaming Video Platform outlines the various touchpoints and interactions a user has with the app throughout their entire experience.

It helps identify pain points, opportunities for improvement, and areas to enhance user satisfaction. Here's a simplified journey map for a video streaming app:

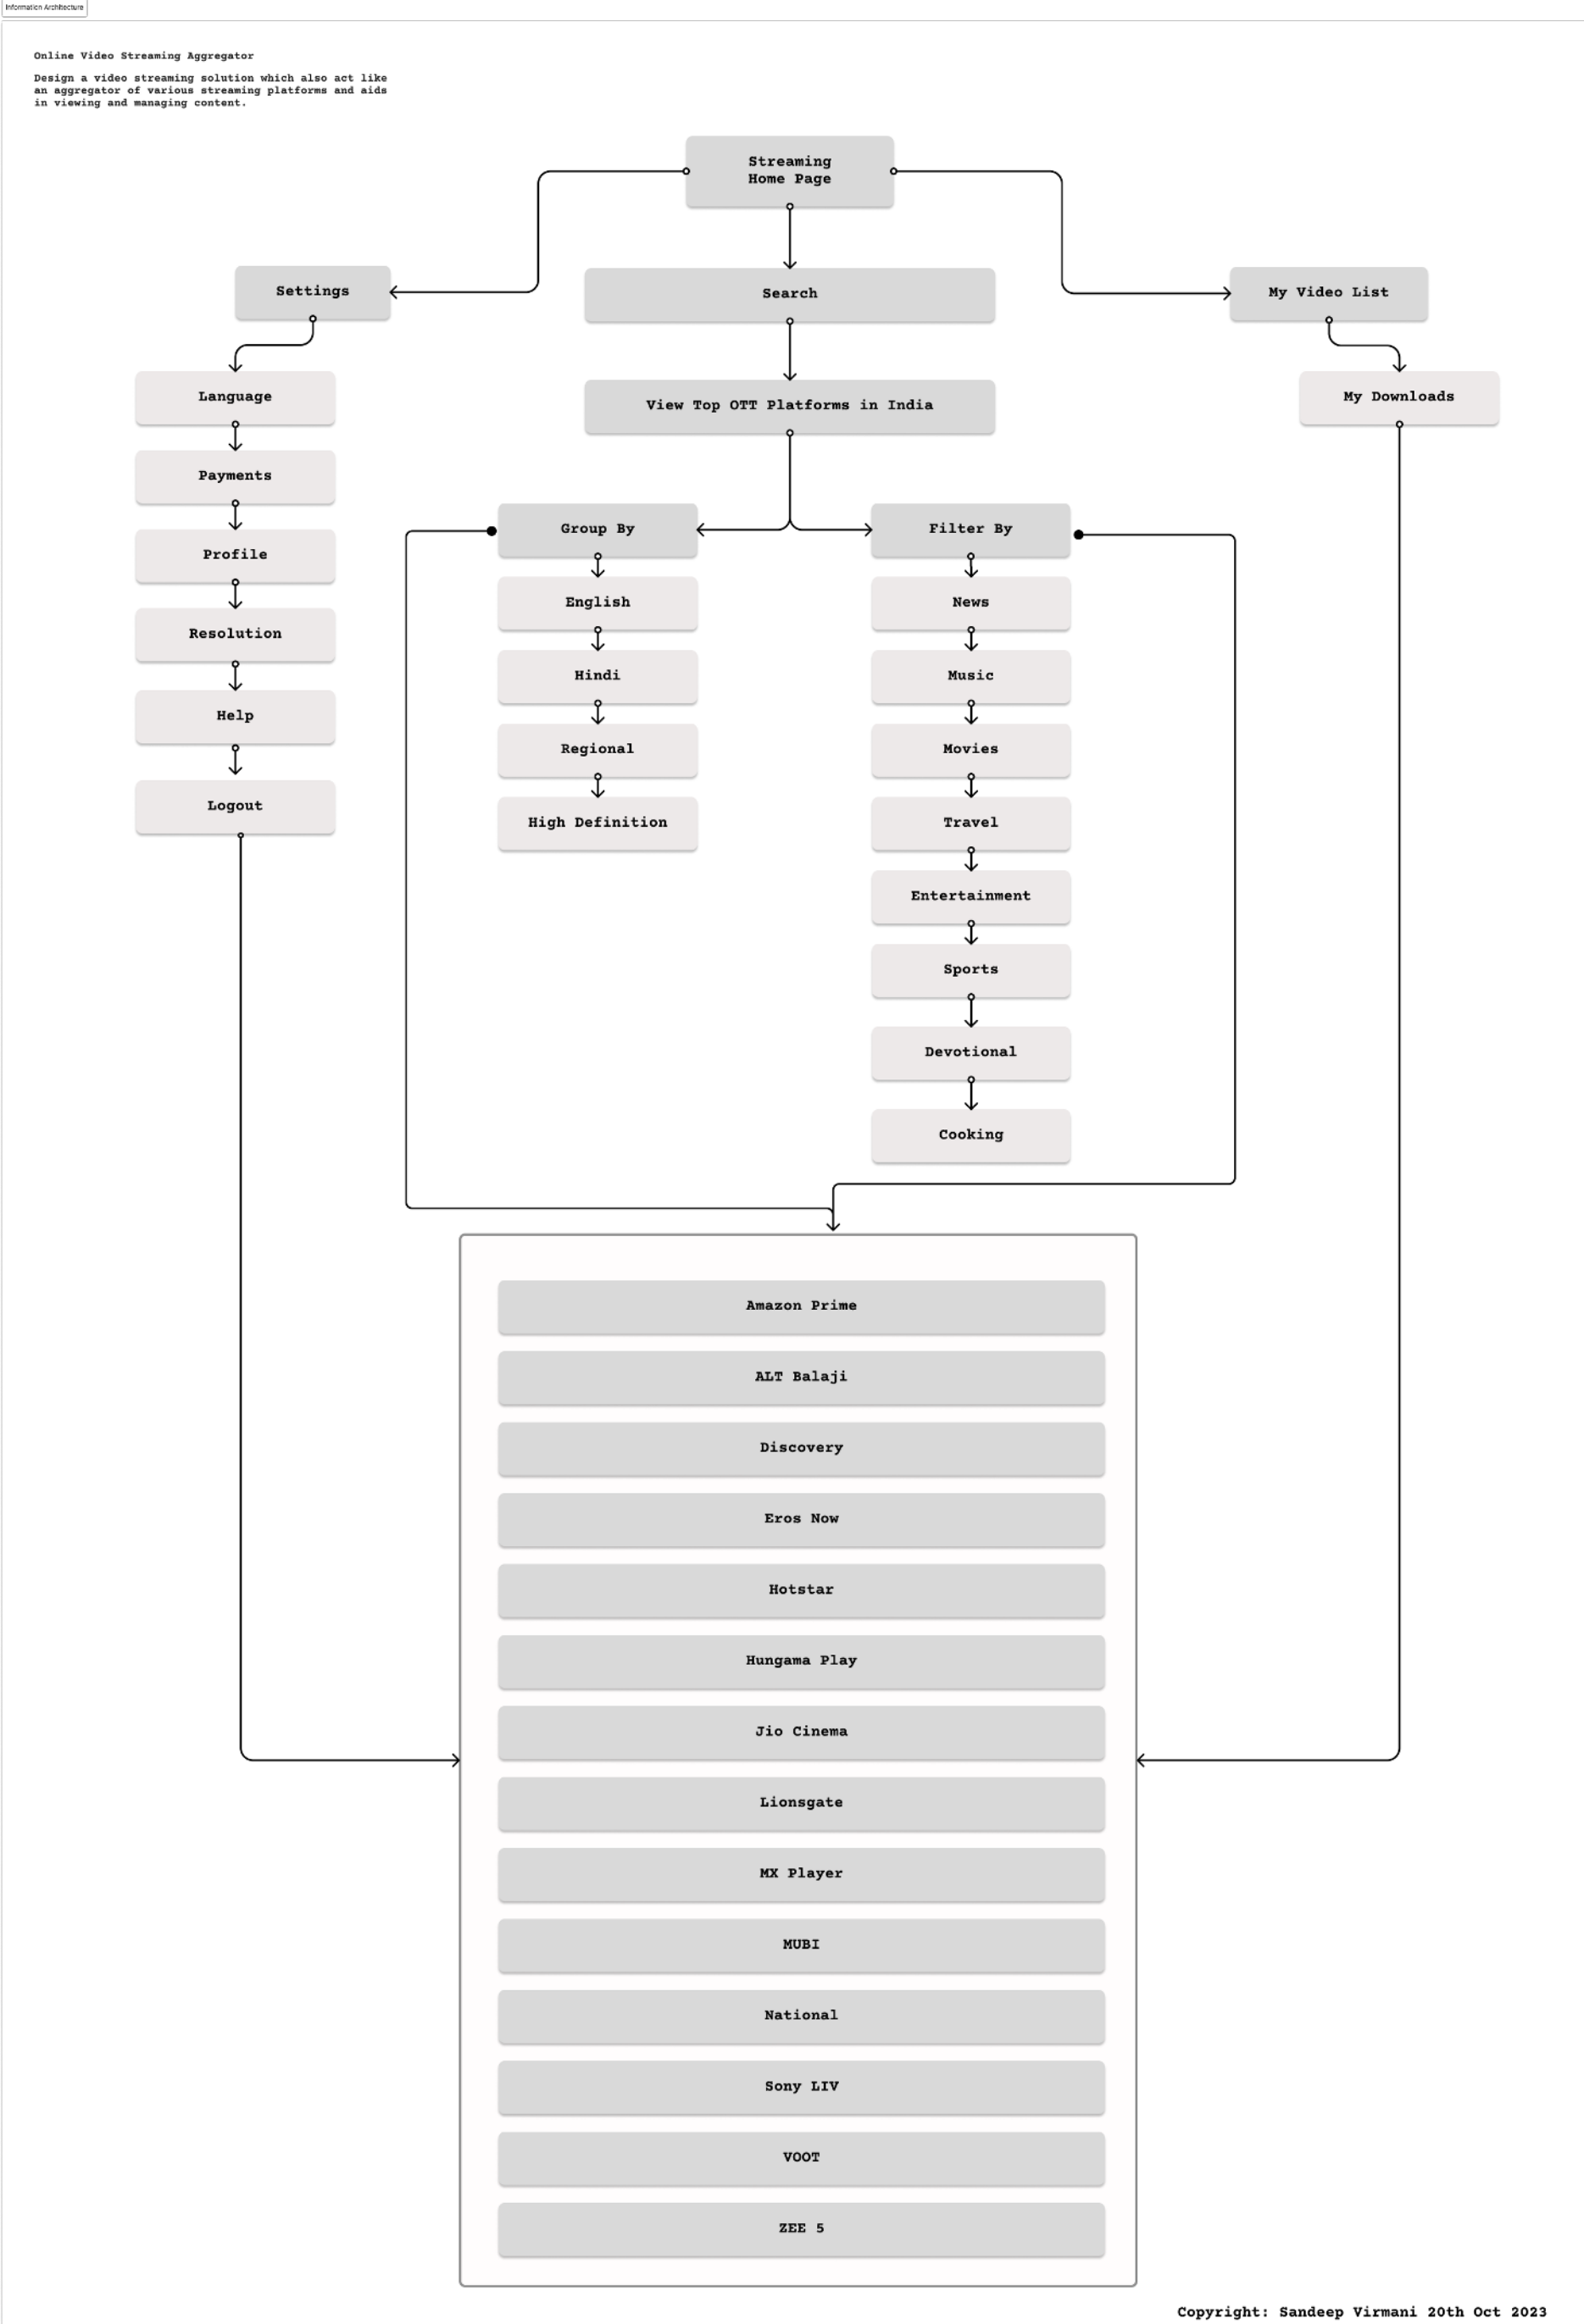

Sandhya loves to seeks seamless streaming, personalized episode recommendations, and early access to new episodes.

Madan Prioritizes high-quality live streaming, sports-related content, and real-time notifications for matches.

Ananya Wants access to a vast library of Fashion Shows,Big Boss Episodes, appreciates high-quality streaming, and values a user-friendly interface.

Sampurna Values devotional and mythological content, social integration, and Indian Success Stories.

Information Architecture

My Online OTT Web Streaming Video Platform goal was to have a very simple information architecture and provide a clear and organized structure for users to discover, access, and manage content from various streaming platforms while offering a personalized and user-friendly experience.

The goal is to streamline content discovery and enhance user engagement across focused search, Groupby and Filterby services.

Filter content from specific platforms (e.g., Netflix, Amazon Prime, Disney+) for users who prefer a specific service and extract curated video links.

- **Featured Content:** Highlight trending or popular shows and movies from different streaming services.
-
- **Categories:** Categorize content into genres, such as action, comedy, drama, and more.
-
- **Search Bar:** Allow users to search for specific shows or movies.
-
- **User Account:** Access to user profiles and settings.

Service Design Journey maps

The Service Design Journey Map helped me to understand the actionable and user touch points for the business.

It clarifies the interactions between recipients/users, touchpoint, and providers, including the front-stage activities that impact the recipient directly, and the backstage activities that the recipient does not see, but are critical to understanding and improving the experience.

Scoping Document

This scoping document outlines the scope and objectives of the design effort project.

The primary goal is to define the project's parameters, deliverables, and expectations.

I use to get this document from the Project Management Team and use to Extract the Acceptance Criteria and User Scenarios.

We input the deadline for this in our design sprint JIRA tickets:

- Kickstart Phase,
- Design Phase,
- In Progress,
- In Review,
- Iteration Phase,
- Verified,
- Closed.
